Job Summary

We are looking for **DevOps Engineer** who has experienced with databases and systems, to join our India based Services team based in Delhi-NCR. If you are looking for challenge and variety in working with data and databases, you will find plenty of it at DTA. We specialize in handling data through all stages of information life cycle and have been at it for 20 years.

As a member of the System and Databases Support Team, you will provide technical assistance to users experiencing difficulties with their databases, and/or their systems which includes installing, configuring, and troubleshooting computer systems. This position involves tasks that database / systems administrators typically do to resolve the clients' technical issues with databases. This position will also monitor systems to ensure availability to all system users and perform necessary maintenance to support system availability. This position requires **excellent communication and technical skills**.

This job requires someone who loves to slice and dice data and has excellent analytical, diagnostic skills, and problem-solving skills.

This position will involve working closely with our clients who are primarily located in USA and Europe. We are very much interested in candidates who have prior work experience with companies in USA and Europe and the willingness to travel to our client offices. While the work will primarily be done from our offices in Delhi-NCR the person filling this position will be expected to travel to client offices.

Our ideal candidate will be detail-oriented, works well with other team members, has **excellent communication** skills, and will thrive in a fast paced, high-energy, multi-tasking environment. This role requires someone who can combine technical and customer-management dimensions along with the ability to project confidence in speaking and presenting in a collaborative customer setting.

Responsibilities Overview

As a member of our global Services team support our clients worldwide:

- Provide on-demand support on server and database related matters to our customers.
- Perform analysis of system needs; contribute, coordinate and facilitate the design, architecture, integration, and installation of products and services.
- Establish best practices and procedures for management of system users, user environments, directories, and security for our customers.
- Support the Systems and Databases Support Team in USA during their off hours to provide technical systems support for the Linux and Windows Operating System based environments.
- Provide On-Call support one week per month and one weekend per month for enterprise system administration related tasks. / Set up and maintain systems operation. and participate in an on-call rotation.
- Document the support calls, procedures, and outcomes of customer calls. Assist in building the technical support database to improve the support procedures.
- Manage Service Requests with operating system and database vendors.
- Install DBA and SA kits for new clients.

Job Requirements and Qualifications

- Bachelor's degree with a background in math will be a PLUS.
- Must have 5+ years system administration experience with a mix of Linux and Window systems in a medium to large business environment.
- Must have command level fluency and shell scripting experience in a mix of Linux and Windows environments.
- Must have experience in one or more public cloud environment: AWS / Azure / GCP
- Strong experience in Ansible development.
- Identify opportunities for improvement in existing process and automate the process using Ansible Flows.
- Fine tune performance and operation issues that arise with Automation flows.
- Experience on Linux environment and shell scripts.
- Experience administering container management systems like Kubernetes would be plus.
- Experience with orchestration & configuration management tools like Cloudformation and/or Terraform would be plus.
- Certification with Red Hat or any other Linux variant will be a BIG PLUS.
- Fluent in the use of Microsoft Office Applications (Outlook / Word / Excel).
- Possess a strong aptitude towards automating and timely completion of standard/routine tasks.
- Experience with automation and configuration control systems like Ansible, Puppet or Chef.
